

# 2023 Product Guide

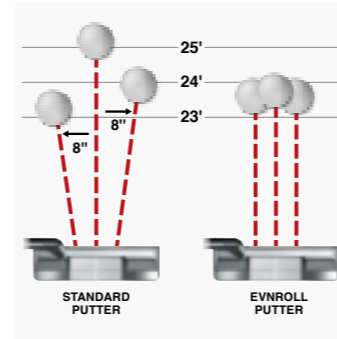

## ABOUT EVNROLL

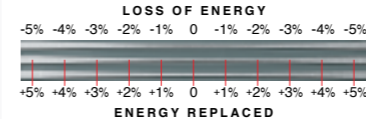

Evnroll was founded in 2016.

Featuring a line of stunning 100% milled putters featuring patented “SweetFace” Technology; Evnroll putters offer an innovative and unique groove technology-engineered to deliver uniform performance across the entire hitting area of the putter face for unprecedented accuracy and zero dispersion.

The brand has won multiple-awards globally each year since it's launch and Evnroll putters are now sold in over 28 countries worldwide.

### PATENTED SWEETFACE™ TECHNOLOGY

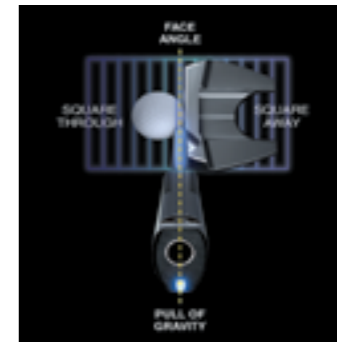

### 100% Milled Made in USA

Every Evnroll putter is 100% CNC milled, hand finished and assembled in Carlsbad, CA.

### Swing weight balanced

Evnroll mills three different head weights to accommodate each club length to ensure perfect swing weight balancing.

### Gravity Grip

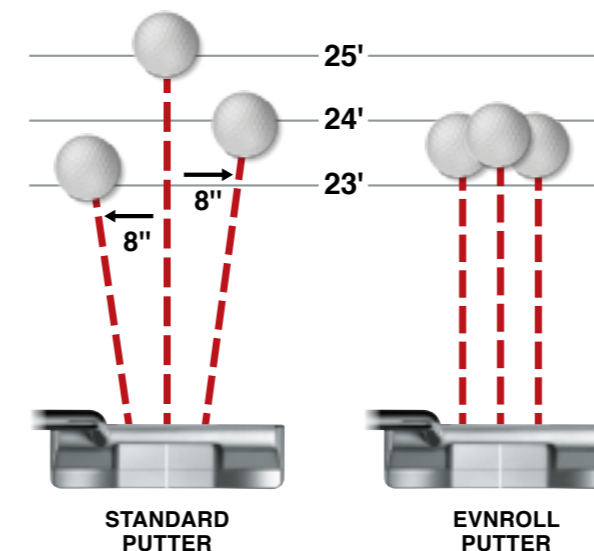

By placing a 70 gram steel rod along the entire length of the grip ½ inch below the shaft, the hands can feel the precise angle of the face. The hands and the putter head are tied together creating a square zone before and after impact.

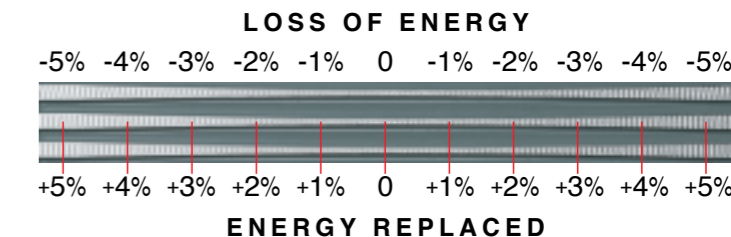

# SWEETFACE™ TECHNOLOGY

US PATENT #9,943,735

Every putter has a sweet spot. Only Evnroll has a sweet face.

**Premise:** On a 25 foot putt a ball hit ½" off center, outside the Sweet Spot (center of percussion), will travel 6" to 8" off line and 12" to 18" shorter. That miss hit is a missed putt.

## How it works:

**EVEN ROLL DISTANCE** – Because the channels get narrower away from the center, the spacing gets wider. This increase in contact surface means more energy transfer and replaces the energy lost when a ball is hit away from the sweet spot. So center and off-center hits travel the same distance.

**ZERO DISPERSION** – A series of closely spaced variable width channels that are wider in the center and get gradually narrower toward the heel and toe. This creates a precisely calibrated inward v-shape from both the heel and toe that progressively redirects the ball down the target line.

# V SERIES

The award-winning V-Series product line has been refined and improved for 2023.

The addition of weights to all models along with adjustable hosels make the V-Series some of the most customizable putters in golf.

EV2 | EV5 | EV8 | ER11vx | EV12

# HOSELS MATTER

Are your misses a **pull** or a **push**?  
It may be your hosel.

MISS	HOSEL
PUSH	<b>LONG</b> Long hosels create less toe hang allowing your putter face to rotate closed at impact.
NEUTRAL	<b>MID</b>
PULL	<b>SHORT</b> Short hosels create more toe hang which slows down face rotation and aids keeping the face open longer.

Putting accuracy is about one thing, returning your putter face square at the exact moment of impact. **HOSELS MATTER.**

**LONG  
HOSEL**

Reduces toe hang to help golfers who tend to miss right (push).

**LONG SLANT  
LONG PLUMBER**

**MID  
HOSEL**

Slightly reduces toe hang to help golfers with a neutral stroke.

**MID SLANT  
SHORT PLUMBER**

**SHORT  
HOSEL**

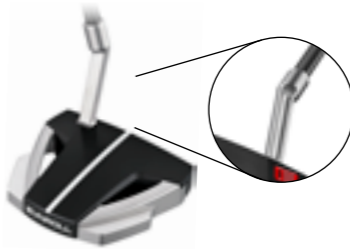

Produces more toe hang to help golfers who tend to miss left (pull).

**SHORT SLANT  
INLINE SLANT**

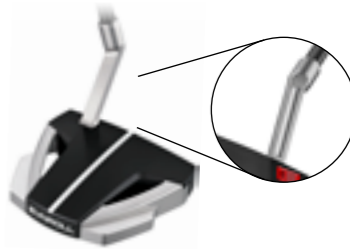

**SHORT SLANT**  
**SHORT HOSEL**

Produces more toe hang promoting a more rotational swingpath that releases through the hitting area. This slant neck design has a pin that fits inside the shaft allowing it to flow seamlessly into the putter head, a preferred look by better players.

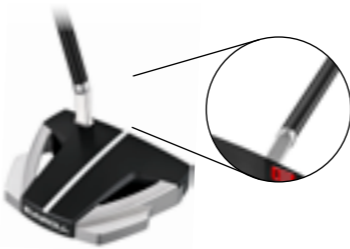

**MID SLANT**  
**MID HOSEL**

Mid Slant hosel neck creates a mid-toe hang that produces a moderate amount of face rotation. This type of shafting does not promote a pull or a push. The collar-type hosel fits over the shaft with a forward slanting hosel arm that produces a one shaft offset.

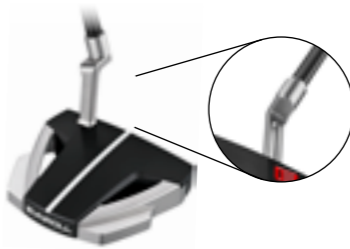

**LONG SLANT**  
**LONG HOSEL**

Features a two-shaft offset with an additional two degrees of loft to accommodate Evnroll's new Midlock putter line.

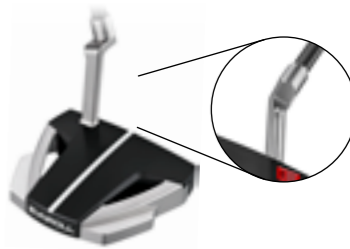

**INLINE SLANT**  
**SHORT HOSEL**

Inline short slant hosel neck creates the greatest amount of toe hang and therefore the most amount of face rotation. This swing path helps avoid pulling the ball. This design has a hosel pin that fits inside the shaft for a seamless presentation at address.

**SHORT PLUMBER**  
**MID HOSEL**

Reduces toe hang and therefore reduces the rotation of the swing path. This plumber neck features a classic over-fit collar-type hosel with a vertical full-shaft offset presentation.

**LONG PLUMBER**  
**LONG HOSEL**

Further reduces toe hang and allows for a more straight-back-straight-through swing path. This plumber neck features a classic over-fit collar-type hosel with a vertical full-shaft offset presentation.

NEW FOR '23

## EV2

Precision milled from 303 stainless steel, the EV2 boasts a new streamlined design to create a premium low-profile look at address.

A thinned out topline, squared off rear bumpers and redesigned sole create a modern, sleek looking blade that seemingly blends into the putting surface, while the redistribution of mass behind the hitting area provides optimal sound and feel feedback.

The addition of two deep-seated rear multi-material weights help increase MOI to provide added stability to Evnroll's most successful blade model ever.

Available in traditional satin and black.

# Tradition meets Technology

NEW FOR '23

## EV5

Available in three color options with three rear chassis designs and a choice of hosel options, the EV5 series of putters epitomize the versatility of the V-Series line from Evnroll.

### 3 X 3 VERSATILITY

Each putter design features a precision CNC Milled 303 stainless steel face and front section along with a choice of three interchangeable 6061 aluminum back chassis designs to suit a multitude of golfers.

### TRADITION MEETS TECHNOLOGY

Essentially the shape of a blade putter, the stainless steel face and front section of each putter provides the feel of a blade from the hitting area while the rear aluminum chassis and four tungsten weights positioned deep and low offer the CG and MOI benefits of a mallet.

### ADJUSTABLE SIX-POINT WEIGHTING

The addition of six weight ports provide precision weighting for targeted swing weighting as well as dynamic toe flow options and perimeter weighting MOI benefits.

## EV5.1

An artistic shape for the simplest aiming option with a standard single top sightline along with linear rear wings that curve back towards the center for macro aimers.

## EV5.2

Offers a standard single top sightline and two cavity sightlines that draft off the rear center line for those players who prefer multiple sightlines in their setup process along with linear rear wing for macro aimers.

## EV5.3

Provides a standard single top sightline coupled with a clean rear linear shape that provides a rectangle aiming window for both parallel and perpendicular aiming.

NEW FOR '23

## EV8

Precision milled from 303 stainless steel, the EV8 boasts a new streamlined design to create a premium low-profile look at address.

A thinned out topline, lowered rear bumpers and redesigned sole create a modern, sleek looking mid-mallet that seemingly blends into the putting surface, while the redistribution of mass behind the hitting area provides optimal sound and feel feedback.

The addition of two deep-seated rear multi-material weights help increase MOI to provide added stability for a mid-mallet design.

NEW FOR '23

# EV12

The EV12 is the newest addition to the V-Series line. A compact mallet with oversized performance.

The body is precision milled from a block of extruded 6061 aluminum, surrounded in the rear corners by 303 stainless steel wings. At three times heavier, the steel wings amplify stability and forgiveness.

As a member of the V-Series line from Evnroll, this clean, modern design offers six different hosel options to accommodate your desired stroke path.

Available in black and white.

# MIDLOCK™

The award-winning product line has been expanded for 2023. Golfers will now have a choice of five of Evnroll's most popular models.

No more special shaft and heavy head weight. The secret is in the patented grip design. The new Midlock Grip features the deepest pistol dimension allowed by the USGA.

By positioning the grip sideways the deep pistol pushes the shaft angle away from the mid-forearm reducing the typical 9 degrees of loft to just 4 degrees, similar to a simple forward press. This comfortable setup allows for an effortless one-piece putting stroke with no moving parts.

## Just add 6"

Midlock is not just a new grip. ***It's an entire putter concept.***

We've simplified the fitting process. The Midlock comes in three sizes. Just add 6" to your standard length.

$$35'' + 6'' = 41''$$

$$34'' + 6'' = 40''$$

$$33'' + 6'' = 39''$$

# ZERO

NEW FOR '23

## Z.1

Borrowing its design from the innovative 2022 ZERO putter, the new Z.1 features the same four-point extreme weighting and powerful ball-sized “zero” alignment. The “.1” indicates the short-slant inline hosel shafting that allows the putter head to flow effortlessly down the target line.

By design, the ultra-light aluminum body has a hollowed-out, ball-sized zero in the center which moves mass to the four corners of the head. By adding an adjustable steel weight to each corner, the Z.1 delivers extremely high MOI.

To further enhance stability and accuracy, every Z.1 comes with the patented Gravity Grip that ties the hands to the putter face to significantly improve face angle at impact.

Powerful alignment. Extreme stability. Unrivalled Accuracy.

CustomER  
CARLSBAD, CA  
CUSTOMIZE YOUR PUTTER  
PAINT - SHAFT - GRIP - HEADCOVER  
SIGHT LINE - LOFT/LIE

## #CustomER

The 'Custom ER' Program is a window into Evnroll's Tour workshop. The program offers golfers the ability to add the ultimate personal touch to their V-Series putter.

In addition to the traditional length, loft and lie adjustments, the online customizer enables golfers to:

- Choose from a selection of sight lines
- Pick from satin or black head and hosel color options
- Add Laser Engraving (**NEW for 2023**)
- Select from 13 different paint colors
- A choice of shaft, grip and headcover combinations.

## Award-winning performance

 **Nothing rolls like an Evnroll.**
